◆ Concept

NEMO project aims at advancing the state of the art of battery management systems (BMS) by engaging advanced physics-based and data-driven battery models and state estimation techniques. Towards achieving this goal, the consortium tends to provide efficient software and hardware to handle, host, process, and execute these approaches within high-end local processors and cloud computing.

Main personality traits: Exciting, casual, essential, fun

For the identity system we took inspiration from these core ideas:

Exploration, prediction, improvement

◆ Logo | Concept

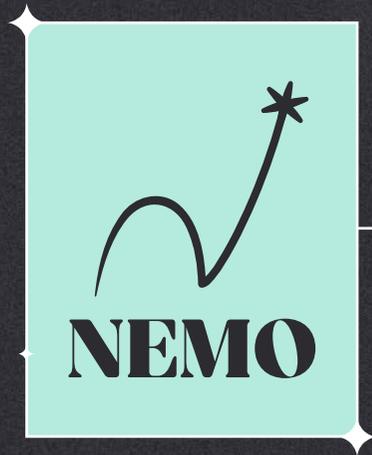

The Nemo logo was designed to symbolize the primary goal of the project: creating new battery models through the exploration of innovative data and techniques based on electrochemical impedance spectroscopy (EIS).

In this design, the star represents the project's ultimate objective, serving as a reference point and final destination while the trail of the star is inspired by the EIS Nyquist curve. These two elements are also used as a starting point for other elements of the visual identity such as icons and shapes.
